

Public Power purchases all of its electric energy from the wholesale market. In other words, we do not generate the energy ourselves, but buy it from the power company. Below, you'll see where that energy came from, based on NEPOOLs reporting of regional generation resources. You are receiving this information because, as your Rhode Island electricity supplier, we are required by law to provide Energy Source Disclosures in order to educate consumers about their electricity

Power Source (Fuel Mix)	%
Air-source heat pump	0.03%
Biogas	0.01%
Biomass	1.97%
Coal	9.08%
Diesel	0.77%
Digester gas	0.08%
Efficient Resource (Maine)	0.21%
Fuel cell	0.32%
Geothermal	0.00%
Ground- and Water-source heat pump	0.07%
Hydroelectric/Hydropower	6.98%
Hydrokinetic	0.00%
Jet	0.02%
Landfill gas	0.53%
Liquid biofuels	0.28%
Municipal solid waste	0.65%
Natural Gas	35.09%
Nuclear	28.81%
Oil	5.19%
Solar Photovoltaic	3.08%
Solar Thermal	0.03%
Trash-to-energy	2.31%
Wind	3.16%
Wood	1.32%
Grand Total	100%

Air Emissions	Lbs / MWh
Carbon Dioxide	1,071.66
Carbon Monoxide	1.00
Mercury	0.00
Nitrogen Oxides	1.78
Particulates	2.83
Particulates (< 10 microns)	0.92
Sulphur Dioxides	3.33
Organic Compounds	0.08

Power Sources: The Power Sources listed on this Disclosure Label represent the system mix for all of New England. There is no way to identify the actual generator that produced the electricity you consume because it is impossible to track the flow of electricity on the grid.

Notes:

1. Electricity customers in New England are served by an integrated power grid, not particular generating units. The above information is based on the most recently available information in the NEPOOL Generation information System.

2. You may call Public Power at 888-354-4415 or the Rhode Island Public Utilities Commission at 401-941-4500 for additional information

All electricity suppliers in Rhode Island must supply a mandated percentage of renewable energy to their customers, known as the Renewable Portfolio Standard (RPS).
